Field of the Invention The present invention generally relates to voltage converters, and more particularly to a dc/dc converter with soft turn-off and a current loop circuit thereof. 2. Description of the Related Art A dc/dc converter is an energy transfer device which transfers energy from one electrical energy source to another. In recent years, with miniaturization of electronic devices, the power demands for dc/dc converters become more and more critical. Therefore, designers must keep a balance between the size of the dc/dc converter and the power demands of the devices supplied by the converter. One design for a small dc/dc converter is disclosed in U.S. Pat. No. 6,716,426, which is entitled xe2x80x9clow cost DC to DC converter.xe2x80x9d The dc/dc converter is capable of handling relatively high power levels, and is capable of providing a regulated output voltage, by limiting the output current and through the use of transformer primary side regulation. However, the input capacitor is not charged from an input source, and therefore has a voltage of zero at the input of the dc/dc converter. In other words, the conventional dc/dc converter is only suitable for applications having a zero voltage at the input of the converter. An object of the present invention is to provide a dc/dc converter with soft turn-off, which is able to receive a positive voltage input without significant voltage drop 82157476af
